Physics Introductory Courses

- **PHYS 114-115-116 Series**
  This series is designed for students majoring in life science. The series focuses on developing algebra-based models to describe the physical world.

- **PHYS 117-118-119 Labs**
  These are laboratory courses associated with PHYS 114-115-116 series.

- **PHYS 121-122-123 Series**
  This series is designed for students majoring in physical science and engineering. The series focuses on developing calculus-based models to describe the physical world.

- **PHYS 141-142-143 Series**
  This honors series is designed for students with a strong interest in physics and strong calculus preparation. The series focuses on developing calculus-based models to describe the physical world in depth and may include active research and cross-disciplinary applications and additional topics.

Operations during COVID-19 pandemic

During 2020 Autumn Quarter, all the introductory courses (PHYS 114, 115, 116, 117, 118, 119, 121, 122, 123, and 141) will be held entirely online, including tutorials and labs.

For PHYS 121, 122, 123, and 141 the Tutorials (quiz sections in time schedule) will be offered synchronously. All the other components in all introductory courses are offered asynchronously.

- For **synchronous** components, students will attend the session via Zoom at the time specified on the time schedule.
- For **asynchronous** components, students do not attend the session via Zoom at the time specified on the time schedule, but there are still due dates for various assignments, and students will work by themselves or in an online small study group on the course materials at their own pace.

We will offer numerous office hours with TAs and professors where students can engage with instructors.
